Farm Profitability & Resource Tracking Report

Project Overview

Developer: Nhambe DB

Tool: Microsoft Excel (Financial Modelling & VLOOKUPs)

Sector: Farm Management / Resource Optimization

1. Executive Summary

This dashboard is designed to help large-scale farm managers and cooperatives track the relationship between input costs and crop yields. By centralizing financial data, the tool helps identify “capital leaks” and ensures that the farm remains financially sustainable.

2. Problem Statement

Many farmers struggle to see the true profitability of individual crops because expenses (seeds, fertilizer, labour) are often tracked separately from revenue. Without a unified view, it is difficult to determine which crops are generating profit and which are operating at a loss.

3. Solution & Technical Implementation

Integrated Data Streams: Built a relational model within Excel that links an Input Log (Expenses) with a Yield Log (Revenue) via crop and date identifiers.

Variance Analysis: Included a “Budgeted vs. Actual” tracking system to identify overspending in real-time.

Profit Margin Visualization: Developed charts that rank crops (e.g., Tomatoes vs. Cabbage) by their actual Gross Profit Margin, rather than just total tonnage.

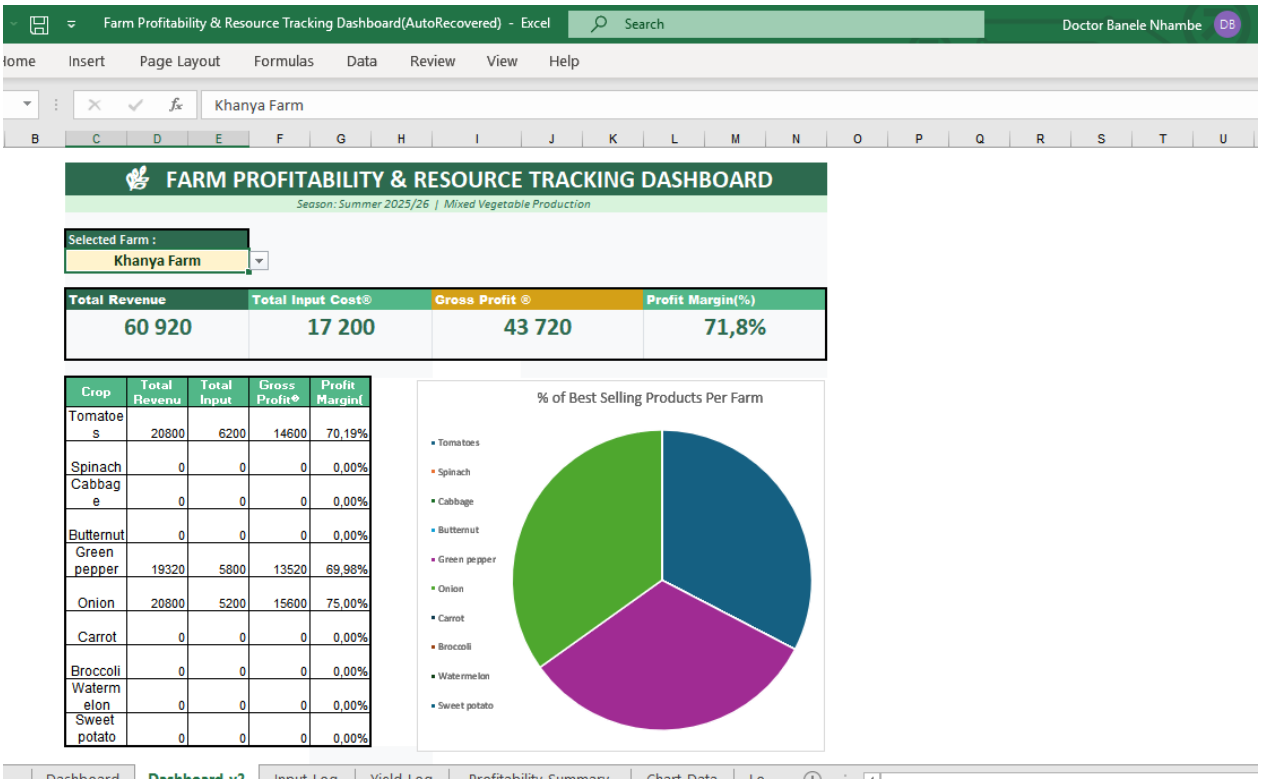
4. Key Impact

Financial Sustainability: Enables managers to identify capital leaks such as excessive fertilizer use relative to yield and improving the farm’s bottom line.

Strategic Planting: Data insights help farmers structure future planting arrangements based on historical ROI, ensuring the business stays above the equilibrium point.

Resource Management: Facilitates better allocation of labour and inputs across different provinces and farm sites.

Screenshot of the dashboard attached below



Crop	Total Revenu	Total Input	Gross Profit®	Profit Margin(
Tomatoes	20800	6200	14600	70,19%
Spinach	0	0	0	0,00%
Cabbage	0	0	0	0,00%
Butternut	0	0	0	0,00%
Green pepper	19320	5800	13520	69,98%
Onion	20800	5200	15600	75,00%
Carrot	0	0	0	0,00%
Broccoli	0	0	0	0,00%
Watermelon	0	0	0	0,00%
Sweet potato	0	0	0	0,00%
